

Outdoor Learning

Though often overlooked, the outdoors can be an effective environment for learning, putting the mind and body in an alert and receptive mode. With supportive worksurfaces and seating, access to power for technologies that require electricity, and shielding from the sun's direct glare and heat, outdoor settings can be stimulating environments for classes, project work and individual study.

Study Spaces

Overhangs provide protection from the elements in mild climates, allowing learning to extend outdoors.

Planters define and shield settings, helping manage distractions.

Umbrellas reduce glare on people and their devices so effective technology-enabled and person-to-person learning can occur.
