

## Accessibility Checker

# Accelerating Learning for Students through Accessible Resources

How Microsoft\* education solutions compare to Google\* in offering accessible resources for students.

### Microsoft Accessibility Checker

**Identifies common issues** like text in tables and alt text on images.

**Classifies issues and offers suggestions.**

**Works throughout Microsoft Office tools web or desktop versions.**

**With only three clicks**, teachers get feedback and suggestions to make their learning content more accessible for all students.

#### Microsoft Accessibility Experience

Built in to Office tools such as Word, PowerPoint, and Outlook

3 clicks to check accessibility for an entire document

Available online or offline

Detailed and comprehensive feedback

#### Google Experience

Requires installing third-party extensions

Minimum of 6 times more clicks to complete the same task

None of the tested extensions worked offline

Inconsistent and sparse feedback

**Microsoft Accessibility Checker provides feedback and suggestions across platforms and offline.**

Given the ease of assessing entire documents with three simple clicks, simplicity and number of languages available for students, Microsoft Accessibility Checker is a better choice than Google Chrome third-party extensions for robust and actionable accessibility suggestions.
